

SOPs Development Services

Need for SOPs :

Standard Operating Procedures (SOP) maximize the efficiency of the normal business process and establish an improved control environment. The careful systematization and documentation of business processes eliminate uncertainty underlying the successful completion of operational activities with full legal compliance.

What we offer:

At Insights, we work with companies to build engaging operating and training manuals that make it easy to onboard new hires, train more employees and scale business. Insights can also use the documents to create handbooks and manuals (like business operating manuals, policy and procedure manuals, etc.). Our standard operating procedure consultants document policies, procedures, as-is and best practices while identifying operational areas for improvement.

Through our SOP development services, we assist in establishing clear, step-by-step instructions for employees to achieve operational goals efficiently and effectively. Although there's finite time in a day, having the right systems in place allows for unlimited growth and productivity. We know managing a business is hard and that's why our SOP training and development solution makes the process as easy as possible.

Approach & Methodology for SOPs

Our standard operating procedure consultants follow a robust methodology to customize your standard operating procedures according to your business structure and needs:

- ☑ Initial Understanding (Including Scope agreement).
- ☑ As-is.
- ☑ Establish best practices.
- ☑ Develop Standard Operating Procedures SOPs.

- Insight's standard operating procedure consultants start by working with you or a designated team lead to define the inputs, outputs, decisions and actions for particular roles within the process, then confirm the process is optimized. In this way, Insights takes SOPs & creates a company's operation manual.
- We will then walk through the steps involved in the operating procedures, creating straightforward instructions that lead to your desired results.
- Last, we'll clearly define standard operating procedures for you to implement in a transparent, user-friendly format.
